

Pod Placement Calculator

How many pods. Where they go. Your spec sheet in 60 seconds.

At a Glance

Input room dimensions, occupancy pattern, thermal load. Calculator outputs pod count, placement diagram, specification in 60 seconds.

Summary

Pod Placement Calculator is starting point for Thermopod™ Biothermal Microconditioning deployment. Input space parameters: room dimensions, ceiling height, window area, occupancy schedule, current HVAC efficiency. Calculator applies Biothermal Microconditioning principles determining optimal pod count and placement. Output is custom deployment diagram, thermal load offset estimate, cost projection. No sales pressure. Just information needed to decide. Easy Retrofit calculator output becomes your specification document for deployment. Design is practical.
